

2016 CPAC - Investors Group Education Scholarship

Recipient: Shi Ting Lu

Selena Lu is a second year Systems Engineering student at the University of Toronto who is also pursuing a minor in sustainable energy and business.

Selena enjoys problem solving and wishes to explore the intersection of technology and sustainability, tackling industrial challenges imposed upon the environment from energy production and consumption.

Though Selena received the University of Toronto Excellence Award for her academic excellence in research on optimizing the system efficiency and analyze customer behaviors in Walmart Canada's queuing systems, she believes that profound community service is equally important. She serves as the conference liaison for Sustainable Engineers Association and is tasked with the responsibility to organize the annual sustainability conference to spark interest in sustainable development.

Selena also coordinates and tutors for the Learning Buddies Network because she sees the necessity to provide elementary students who are in financial difficulty the opportunity to tackle and excel in their studies. She also acted as Finance Director for the Undergraduate Research Day Conference 2016 as well as high school outreach ambassador for Women in Science and Engineering. She hopes that by excelling in her studies, she can inspire more females to explore and consider career opportunities in Science, Technology, Engineering and Math.
